

In 1897, the first case of the disease was reported in the United States. The disease is caused by a virus that is spread by mosquitoes. The disease is most common in tropical and subtropical regions. The disease is characterized by fever, headache, and joint pain. The disease is usually self-limiting and resolves within a few days. However, in some cases, the disease can be fatal. The disease is most commonly found in the United States, but it has also been reported in other countries. The disease is most commonly found in the United States, but it has also been reported in other countries. The disease is most commonly found in the United States, but it has also been reported in other countries.
